First-Level Assessment

HAG-WALKIN-L1-v4

Questions	20 (all multiple choice)
Marks	20 — 1 per question
Duration	25 minutes
Negative marking	None
Sections	A (4) · B (5) · C (5) · D (3) · E (3)
Taken at	hr-hiring-automation.vercel.app/test.html

⚠ EVALUATOR COPY — CONTAINS THE ANSWER KEY

Never issue this document to a candidate. It marks the correct option for every question. One copy leaked in the hall invalidates the day's results.

Option order is shuffled per candidate on the online test. The A/B/C/D letters here are the canonical order and will *not* match what any individual candidate saw on their phone — match by the option text, not the letter.

The paper is not AI-proof. A language model answers these situational questions very well. Invigilation — phones collected at the desk — is the control.

Section A — Site Execution & Sequencing

Q1–Q4 · 4 marks

Q1

A

Situation. The plastering team arrives to start work in a room, but the electrical conduits in that room have not been laid yet.

What should be done?

- A Start plastering; the electrical team can break the wall later
- B Send the plastering team home for the day
- C Wait for the conduits to be laid, and move the plastering team to another room in the meantime** ✓
- D Plaster only half the room

Answer: C. Electrical goes in before plaster. Breaking a finished wall afterwards means doing the same work twice. Moving the team to another room keeps the day productive.

Q2

A

What is the correct order of these activities on a site?

- A Painting → Plastering → Brickwork → Flooring
- B Brickwork → Plastering → Flooring → Painting** ✓
- C Flooring → Brickwork → Painting → Plastering
- D Plastering → Brickwork → Painting → Flooring

Answer: B. Structure first, finishes last: brickwork, then plaster, then floor, then paint.

Q3

A

Situation. Handover is tomorrow. Two things are pending: 3 power points are not working, and 40 small paint touch-ups are left.

What should be finished first?

- A The 40 paint touch-ups, because there are more of them
- B The 3 power points, because the client cannot use the office without them** ✓
- C Neither — hand over and finish everything next week
- D Do a little of both and leave the rest

Answer: B. Finish what stops the client using the space before what they can only see. Paint touch-ups can be closed after they move in; dead power points cannot.

Q4

A

Situation. Your painters have nothing to do because the area they were supposed to paint is not ready yet.

What is the best thing to do?

- A Let them sit idle until the area is ready
- B Send them home for the day
- C Start painting the area anyway and correct it later

D Move them to an area that is ready, and inform your senior about the delay

Answer: D. Keep the labour working, and make sure your senior knows why the original area was held up — a delay nobody was told about becomes your delay.

Section B — Client & Stakeholder Handling

Q5–Q9 · 5 marks

Q5

B

Situation. During a site visit the client verbally asks you to shift a partition and add two extra sockets. Nothing is given in writing.

What should you do?

A Do the work immediately to keep the client happy

B Confirm the change by email or message, get the client's approval in writing, and then start

C Refuse and tell the client it is not your job

D Do the work and quietly add the cost to the bill later

Answer: B. A verbal change with nothing in writing is the most common reason extra work never gets paid for. Confirming it takes five minutes and protects both sides.

Q6

B

Situation. You come to know that an important material will reach the site three weeks late.

When should you inform the client?

A Immediately, along with the reason and what you are doing about it

B At the next monthly meeting

C Only after you have arranged a replacement

D Only if the client asks about it

Answer: A. Bad news does not get better by waiting. The client may have their own plans depending on that date, and the earlier they know, the more options everyone has.

Q7

B

Situation. You notice a finishing defect that the client has not seen yet. There is enough time to correct it before handover.

What should you do?

- A Say nothing and hope the client does not notice
- B Cover it up as best you can
- C Inform the client and correct it before handover** ✓
- D Wait and see if the client points it out

Answer: C. A defect you report and fix shows you are on top of the job. The same defect found by the client after handover damages trust in everything else you have done.

Q8

B

Situation. A client is angry on a call about a delay and is raising their voice.

What is the best way to handle it?

- A Argue back and explain that it is not your fault
- B Listen without interrupting, apologise for the inconvenience, explain the reason, and give a clear new date** ✓
- C Blame the vendor and the other contractors
- D End the call and let your senior deal with it

Answer: B. Let the client finish, acknowledge the problem, then give them something concrete — a reason and a date. Arguing or blaming others makes the call longer and the client angrier.

Q9

B

Situation. The client asks you to do some extra work that is not part of the agreed scope and has not been approved.

What should you do?

- A Start the work straight away
- B Tell the client flatly that it is not possible
- C Politely tell the client it needs approval, and get it confirmed through your manager** ✓
- D Agree to it and then forget about it

Answer: C. Never refuse a client outright, and never start unapproved work on your own. Take it through your manager so it is approved properly and the client still feels heard.

Section C — Procedure & Documentation

Q10–Q14 · 5 marks

Q10

C

Situation. A person you do not know comes to the site and tells your team to change the work that is going on.

What should you do?

- A Follow the instruction immediately
- B Do not change anything; check with your manager first about who this person is** ✓
- C Ignore him completely and say nothing to anyone
- D Let the contractor decide whether to follow it

Answer: B. Only an authorised person can change the work. Check first — but do tell your manager, rather than simply ignoring it.

Q11

C

Situation. Material arrives at site. When you count it, the quantity is less than what is written on the challan.

What should you do?

- A Sign the challan as it is to avoid an argument
- B Unload it and sort the paperwork out later
- C Send the entire truck back
- D Write down the actual quantity received, get it signed, and inform the purchase team the same day** ✓

Answer: D. Signing for material you did not receive means the company pays for it. Recording the real quantity on the spot is what makes the shortage recoverable.

Q12

C

Situation. A plank falls from a height at the site. Nobody is injured.

What should you do?

- A Nothing — no one was hurt
- B Stop work in that area, make it safe, and report it immediately** ✓
- C Mention it in the next weekly meeting
- D Just note it down and continue working

Answer: B. An accident where nobody was hurt is a warning. Reporting it is how the same thing is prevented from happening again with somebody standing underneath.

Q13

C

Situation. You find that a newer version of the drawing has been issued, but the team is still working from the old one.

What should you do?

- A Continue with the old drawing since work has already started
- B Switch to the new drawing without telling anyone
- C Stop work in that area, confirm with your manager which drawing is correct, and remove the old copies from site** ✓
- D Let each contractor decide which drawing to follow

Answer: C. Confirm which drawing is valid before anything more is built, and take the old copies away — otherwise somebody picks one up tomorrow and builds from it again.

Q14

C

Situation. The project is complete and the client is taking handover.

Apart from the keys, what should be handed over?

- A Only the keys — the rest can be sent later
- B Only the warranty papers
- C Drawings, warranties, operation manuals and the signed handover document** ✓
- D Nothing else is required

Answer: C. The client needs the documents to run and maintain the space, and the signed handover is what formally closes the job.

Section D — Commercial Judgement

Q15–Q17 · 3 marks

Q15

D

Situation. The client asks for an extra 100 sq m of flooring. The agreed rate is ₹1,200 per sq m.

What is the value of the extra work, and what should you do?

- A ₹1,20,000 — bill it as extra work after taking the client's written approval** ✓
- B ₹1,20,000 — do it free of cost, it is a small quantity
- C ₹12,000 — bill it as extra work
- D Do the work and add the cost quietly to the next bill

Answer: A. $100 \times ₹1,200 = ₹1,20,000$. Extra work is chargeable, but only if the client approves it in writing first.

Q16

D

Situation. You need 200 units of a material. Vendor A quotes ₹500 per unit and Vendor B quotes ₹450 per unit. Quality and delivery time are the same.

Which should you choose?

- A Vendor A
- B Vendor B — it saves ₹10,000**
- C Vendor B — it saves ₹1,000
- D Split the order between both vendors

✓

Answer: B. The difference is ₹50 per unit. $200 \times ₹50 = ₹10,000$ saved, for the same quality and the same delivery.

Q17

D

Situation. 500 bags of cement were issued to site. 470 bags were used in the work. 10 bags are lying in stock.

What does this show, and what should you do?

- A Nothing is wrong — the account is complete
- B 10 bags are missing — write them off
- C 20 bags are not accounted for — inform your senior and check the records**
- D 20 bags are extra — reduce the next order

✓

Answer: C. $500 - 470 - 10 = 20$ bags unaccounted for. It may turn out to be wastage or a recording error, but it has to be checked and reported, not ignored.

Section E — Safety & Problem Diagnosis

Q18–Q20 · 3 marks

Q18

E

Situation. You see a worker on a ladder about 3 metres above the ground. He is not wearing a helmet and has no safety belt.

What should you do first?

- A Continue with your own work and mention it later
- B Stop the work immediately and arrange a helmet and safety belt before he continues**
- C Take a photo and send it to the group
- D Tell him to finish quickly and come down

✓

Answer: B. A fall cannot be undone. Stop the unsafe work first; everything else comes after the person is safe.

Q19

E

Situation. A worker from another agency is doing unsafe work right next to your team.

What should you do?

- A Nothing — he is not your worker
- B Only tell your own team to stay away from him
- C Stop the unsafe work and inform the safety in-charge and your senior** ✓
- D Wait and raise it in the next safety meeting

Answer: C. It does not matter whose worker he is. The danger is next to your people, so stopping it and reporting it is your responsibility.

Q20

E

Situation. The same false ceiling problem has happened three times in the same building. It has been repaired each time and has now happened again.

What is the best action?

- A Repair it once more and watch it
- B Replace all the false ceilings in the building
- C Find out the reason why it keeps happening and fix that** ✓
- D Blame the ceiling contractor and recover the cost

Answer: C. The same failure happening again and again means there is one underlying cause. Repairing it a fourth time without finding that cause guarantees a fifth.

Answer key — quick reference

Canonical option order. The online test shuffles options per candidate, so verify by option text when checking a printed sheet.

Q	SEC	ANS
1	A	C
2	A	B
3	A	B
4	A	D
5	B	B
6	B	A
7	B	C
8	B	B
9	B	C
10	C	B

Q	SEC	ANS
11	C	D
12	C	B
13	C	C
14	C	C
15	D	A
16	D	B
17	D	C
18	E	B
19	E	C
20	E	C

SCORE	%	BAND	ACTION
17–20	85%+	STRONG	Shortlist — send to the technical panel first
12–16	60%+	AVERAGE	Proceed to interview normally
8–11	40%+	WEAK	Judge by role and experience
0–7	0%+	BELOW_BAR	Interview only if experience is strong

This score is a queue-prioritisation tool, not a hiring gate. It decides who the panel sees first on a busy day. A low score must never auto-reject a candidate with strong relevant experience — an experienced site supervisor may score low and still be the right hire. See §6.3 of HAGERSTONE_DRIVE_AND_ASSESSMENT.md.
